

Nobody knows freestyle better than Haro. That's because freestyle's founding father, Bob Haro, designed the first freestyle bike ever made and continues to design the most advanced bikes you can own. Bikes like the 1989 Nora Cup Bike of the Year, the Haro Master. The first of a new generation of freestyle bikes featuring bashguard technology.

The innovations and quality that are built into every Haro bike are easy to see. What you can't see are the years of riding experience and knowledge gained from competi-

tion. And of course when it comes to competition, Team Haro has no equal. Past and present members include a who's who of freestyle. Fiola, Dominguez, McCoy, Johnson, Moliterno, Blyther, Wilkerson and Hoffman. And titles like 'King of Vert,' Team of the Year and Rider of the Year to name a few.

Check out the 1990's soon and you'll understand why Haro is first in freestyle, and has been for over ten years.

In his last year as an amateur, Team Haro's Mike King won the ABA Number 1 title. In his first year as a professional he accomplished what was thought to be impossible, another Number 1 title. The bike he rode? A Haro Group 1, of course. The bike that has won more ABA and NBL professional titles in the past three years than any other brand.

That kind of performance is rare. But then so is the technology Haro applies to race bike design. A good

example is the new Group 1 Team frame and fork. An aluminum and chromoly composite that makes other frames seem prehistoric. A bike so advanced it has to be seen to be believed.

The performance of Haro Group 1's may seem unbelievable. But the results have been proven, over and over. And now that performance is available in three new bikes for 1990. The Group 1A, Group 1B and the Group 1C. Bikes designed to do one thing. Win races.

Maybe your style of riding can't be categorized as freestyle or BMX. You ride for fun not for titles. Now you don't have to feel left out. Because Haro offers some interesting alternatives that make sense for riders like yourself. We call them cross terrain bikes.

For instance, we make two 6 speed cross terrain bikes

designed to go anywhere you do. The 20" Rage and the 24" Intense.

And for those of you who can get by with one speed, we make the Psycho and Aggro. All purpose bikes built for fun on any terrain.
